PROFESSIONAL SUMMARY

Business Analyst and Product Engineer with 3+ years of experience translating operational needs into clear requirements, automated workflows, ERP capabilities, and reliable digital products. Current work focuses on business-process automation at MTN Ghana. Background spans process analysis, stakeholder alignment, UAT, change enablement, Odoo delivery, full-stack product development, reporting, and role-aware operational systems.

CORE SKILLS

Business analysis	Process analysis, requirements gathering, process mapping, acceptance criteria, stakeholder alignment, UAT coordination, change enablement
Automation + ERP	Business-process automation, workflow design, Odoo.sh, Odoo Studio, Python ORM, QWeb/XML, operational reporting
Product engineering	React, Astro, Vue 3, JavaScript, Node.js, Express, REST APIs, PostgreSQL, Prisma, accessible frontend systems
Delivery + quality	Product discovery, documentation, rollout planning, analytics, Playwright, API testing, Git, CI/CD, security and accessibility checks

EXPERIENCE

Business Analyst

Accra, Ghana | 2026 - Present

MTN Ghana

- Analyze current-state business processes and identify practical opportunities for automation.
- Translate operational needs into clear requirements, workflow definitions, and implementation priorities.
- Align business and technical stakeholders around process changes, expected system behavior, and acceptance criteria.
- Support validation and adoption so automated workflows remain usable, traceable, and sustainable.

IT Technician and Front-End Developer

Remote | Oct 2024 - Jul 2025

IBW Surveyors Ltd.

- Rebuilt internal portal experiences with responsive, accessibility-aware UI patterns and clearer navigation.
- Delivered reporting workflows using BigQuery, Looker Studio, and SQL Server to improve operational visibility.
- Automated onboarding and document-routing workflows and supported security coordination with MSP partners.

Digital Experience Lead and ERP Systems Manager

Hybrid | Sep 2022 - Oct 2024

IN Engineering + Surveying Ltd.

- Led Odoo ERP rollout and customization across five departments spanning CRM, project delivery, operations, and finance.
- Built workflow automation with Python, JavaScript, QWeb, XML, and Odoo Studio to reduce repeated manual work.
- Converted business requirements into maintainable workflows, reporting structures, training, documentation, and UAT plans.
- Improved website, intranet, ERP, analytics, and client workflow touchpoints through UX and content iteration.

SELECTED SYSTEMS

REEBS Party Themes Storefront and Operations ERP

Stack: React, Vite, Express, Prisma, PostgreSQL

A live customer storefront paired with a role-aware operations portal and backend.

- Connects CRM intake, POS, orders, rental bookings, inventory, finance, fulfillment, maintenance, workforce workflows, and reports.
- Surfaces time-window KPIs, revenue mix and trends, assigned work, stock risk, and booking conflicts for operational decisions.

Development Operations System (Dev ERP)

Stack: React, Express, Prisma, PostgreSQL, Playwright

A live internal ERP for project delivery and cross-application operations.

- Covers projects and tasks, proposals, form intake, rent, accounting, invoicing, appointments, reporting, users, audit activity, and system health.
- Uses cookie sessions, CSRF protection, capability checks, organization scoping, modular APIs, scheduled jobs, and external integrations.

Odoo ERP Customization

Stack: Odoo.sh, Python ORM, JavaScript, QWeb/XML, Odoo Studio

Cross-department ERP delivery focused on process automation, adoption, and reporting consistency.

- Automated CRM-to-project-to-accounting transitions, project identifiers, notifications, and invoice-status follow-up.
- Paired technical changes with staged QA, documentation, training, and office-hours enablement.

Astro Portfolio and Content Platform

Stack: Astro, React, structured data, automated quality checks

A static-first public portfolio built for search visibility, accessibility, performance, and maintainable project storytelling.

- Generates crawlable project and article routes with canonical metadata, schema markup, sitemap output, and optimized media.
- Automated tests cover SEO output, local links, assets, duplicate IDs, security headers, and delivery budgets.

EDUCATION

Trent University

Bachelor of Arts Honours (BAH), Business and Computer Science
